EDUCATION

Eastern Illinois University - Lumpkin College of Business & Technology

Charleston, IL

Bachelor of Science in Computer Information Technology, Minor in Cybersecurity | GPA: 3.94 / 4.0

08/2024 - 05/2028

- Deans List, OVC Academic Medal of Honor, NCAA Division I Men's Track & Field Student-Athlete
- Contributed conference-scoring performances to the 2026 Outdoor Conference Championship-winning men's track & field team
- Relevant Coursework: Cybersecurity, Database Systems, C++, Python, Java, Systems Analysis & Design

SKILLS & INTERESTS, & CERTIFICATIONS

Skills: C++, Java, Kali Linux, Mac Terminal, Office 365, Python, SQL, Artificial Intelligence & Machine Learning, Prompt Engineering, Docker, UTM (Virtualization), Scikit-learn | CompTIA Security+

Interests: Cybersecurity and network security, emerging technologies, IT systems troubleshooting, fintech, cloud computing, leadership development, competitive athletics, people, & circus arts

PROFESSIONAL EXPERIENCE

Greenwood Project

Chicago, IL

FinTech Academy Scholar

01/2026 - Present

- Selected for a competitive year-long FinTech Academy with weekly engagements to enhance understanding of financial technology and digital transformation in financial services.
- Explore FinTech fields: data analytics, blockchain, software engineering, and risk management. Connect academic knowledge and technical skills to real-world finance applications.
- Boosting workplace effectiveness with courses in executive presence, communication, relationship-building, and corporate navigation.

City Colleges of Chicago – Harry S Truman College

Chicago, IL

STEAMBassador

03/2026 - 03/2026

- Teach coding and computational thinking concepts to K-12 students through hands-on STEM activities and technology projects.
- Mentor students in problem-solving, digital literacy, and foundational computer science skills.
- Support STEM outreach initiatives promoting technology education and career exploration.

Datacom

Remote

Cybersecurity Job Simulation (Forge)

03/2026 - 03/2026

- Executed a cybersecurity simulation analyzing enterprise systems and data protection strategies.
- Investigated a simulated cyberattack and produced a detailed incident response report outlining remediation strategies.
- Evaluated system vulnerabilities through structured risk assessment and proposed mitigation strategies.

PROJECTS

GrowthPilot – AI Business Decision Support Platform

Chicago, IL

Python • React • FastAPI • SQLite • OpenAI API • Scikit-learn • Git

05/2026 - 06/2026

- Architected and developed a full-stack AI business decision support platform integrating 7+ technologies, enabling entrepreneurs to analyze pricing, profitability, and business strategy through conversational AI and predictive analytics.
- Designed a modular 6-stage AI reasoning pipeline that transforms natural language into structured business recommendations through intent detection, execution planning, machine learning analysis, evidence collection, and AI-generated insights.
- Developed an ML-powered pricing engine leveraging 2 predictive models to evaluate 7 pricing scenarios per recommendation, optimizing pricing decisions based on projected demand and profitability.
- Evolved the project from a command-line pricing calculator into a scalable full-stack application by implementing 15+ business analytics capabilities, persistent data management, and modular AI architecture through continuous debugging, refactoring, and iterative software design.

Mobile Bank – C++ Console Banking Application

Chicago, IL

C++ • Object-Oriented Programming • File I/O • Secure Authentication

08/2025 - 08/2025

- Engineered a secure C++ command-line banking application featuring 5+ integrated banking operations with persistent file-based storage architecture.
- Implemented secure user authentication using password hashing (std::hash) to protect account credentials and strengthen account access security.
- Developed core banking functionalities including deposits, withdrawals, balance tracking, and transaction history logging capable of handling hundreds of simulated transactions.
- Applied object-oriented programming principles, modular architecture, and reusable class structures, reducing code redundancy by 35% and improving system maintainability/scalability.
